```

Two years, Bertens vs History - all COPD

```
## Setting levels: control = 0, case = 1
```

```
## Setting direction: controls < cases
```

```
##
```

```
## Call:
```

```
## roc.default(response = eclipseComplete$Observed_Exac_in2to3, predictor = eclipseComplete$predictedBertens)
```

```
##
```

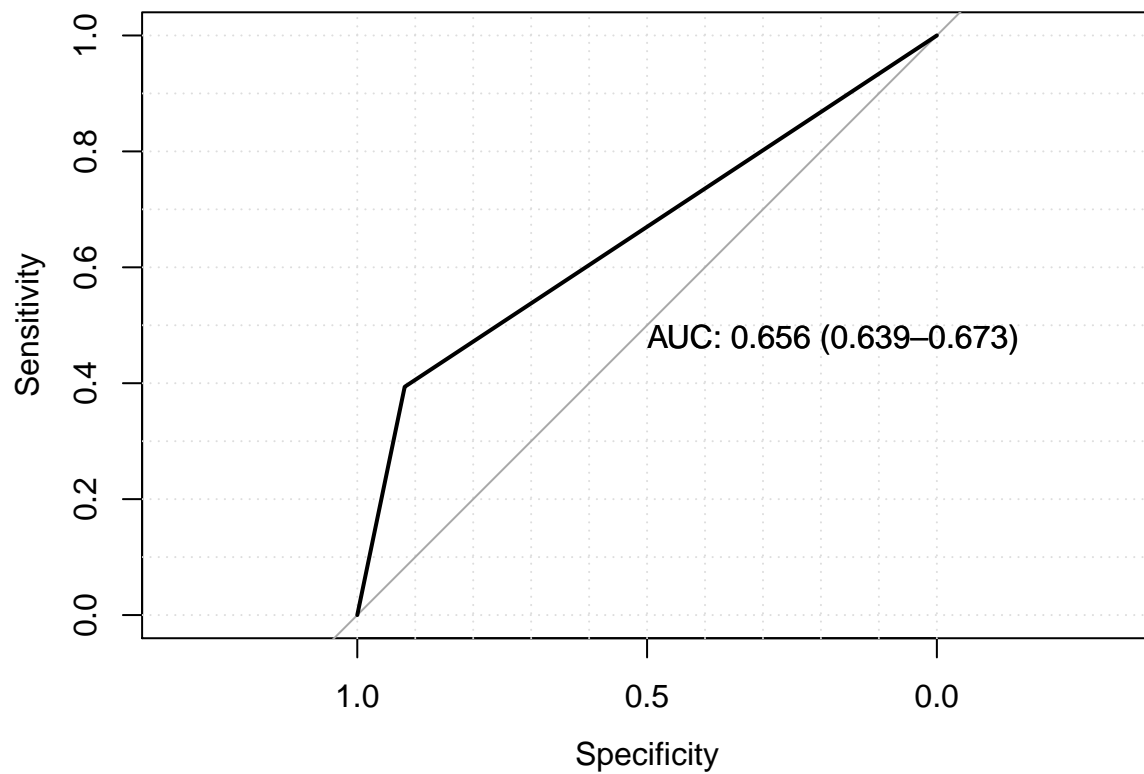

```
## Data: eclipseComplete$predictedBertens in 599 controls (eclipseComplete$Observed_Exac_in2to3 0) < 12
```

```
## Area under the curve: 0.6984
```

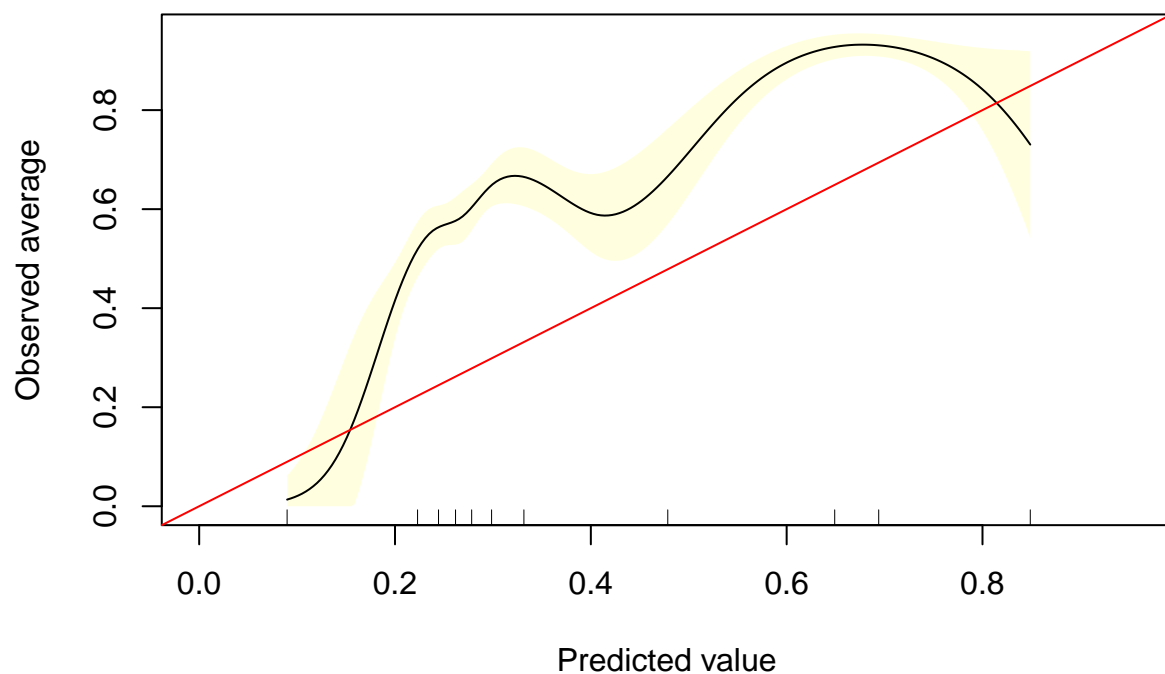

```
## 95% CI: 0.674-0.7229 (DeLong)
```

```
## Setting levels: control = 0, case = 1
```

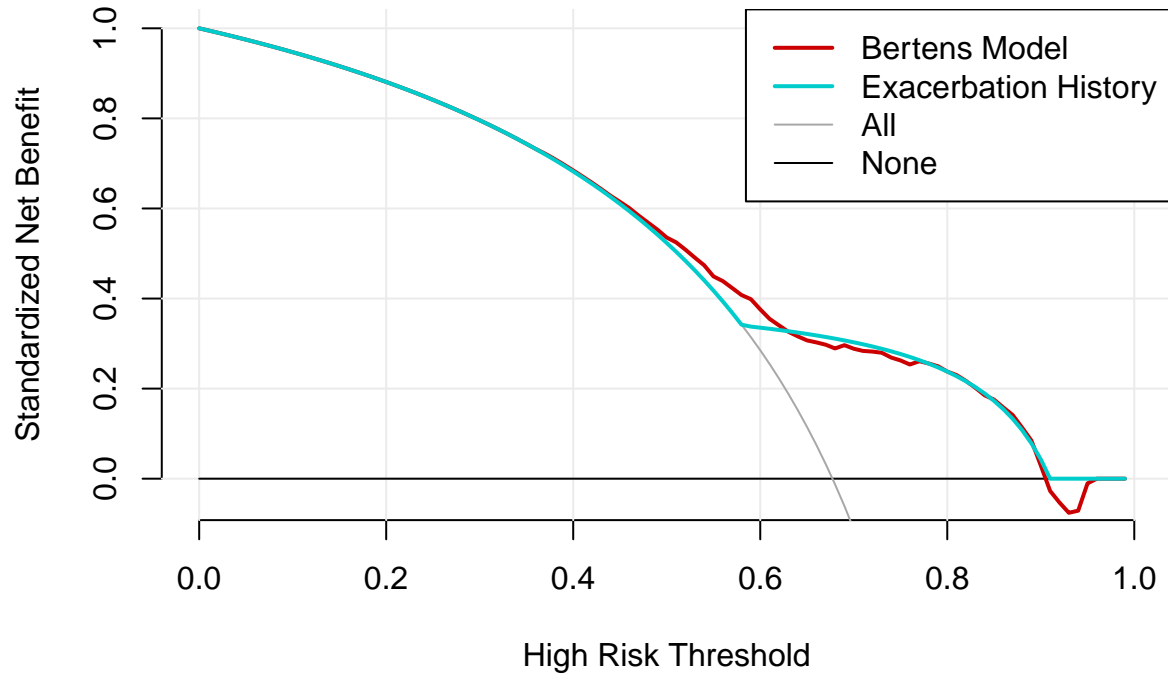

```
## Setting direction: controls < cases
```

```
##
## Call:
## roc.default(response = eclipseComplete$Observed_Exac_in2to3, predictor = eclipseComplete$year1Fr
##
## Data: eclipseComplete$year1FreqExacerbator in 599 controls (eclipseComplete$Observed_Exac_in2to3 0)
## Area under the curve: 0.656
## 95% CI: 0.6386–0.6734 (DeLong)
```

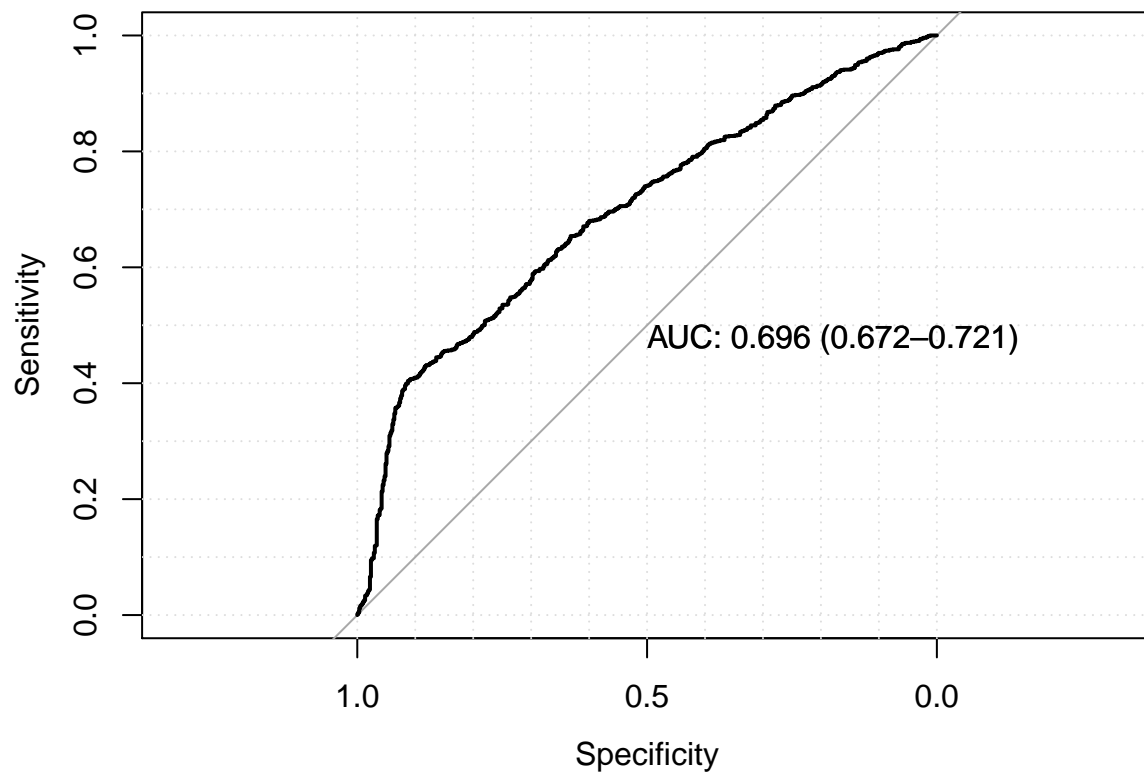

Note: When multiple decision curves are plotted, decision curves for 'All' are calculated using the p

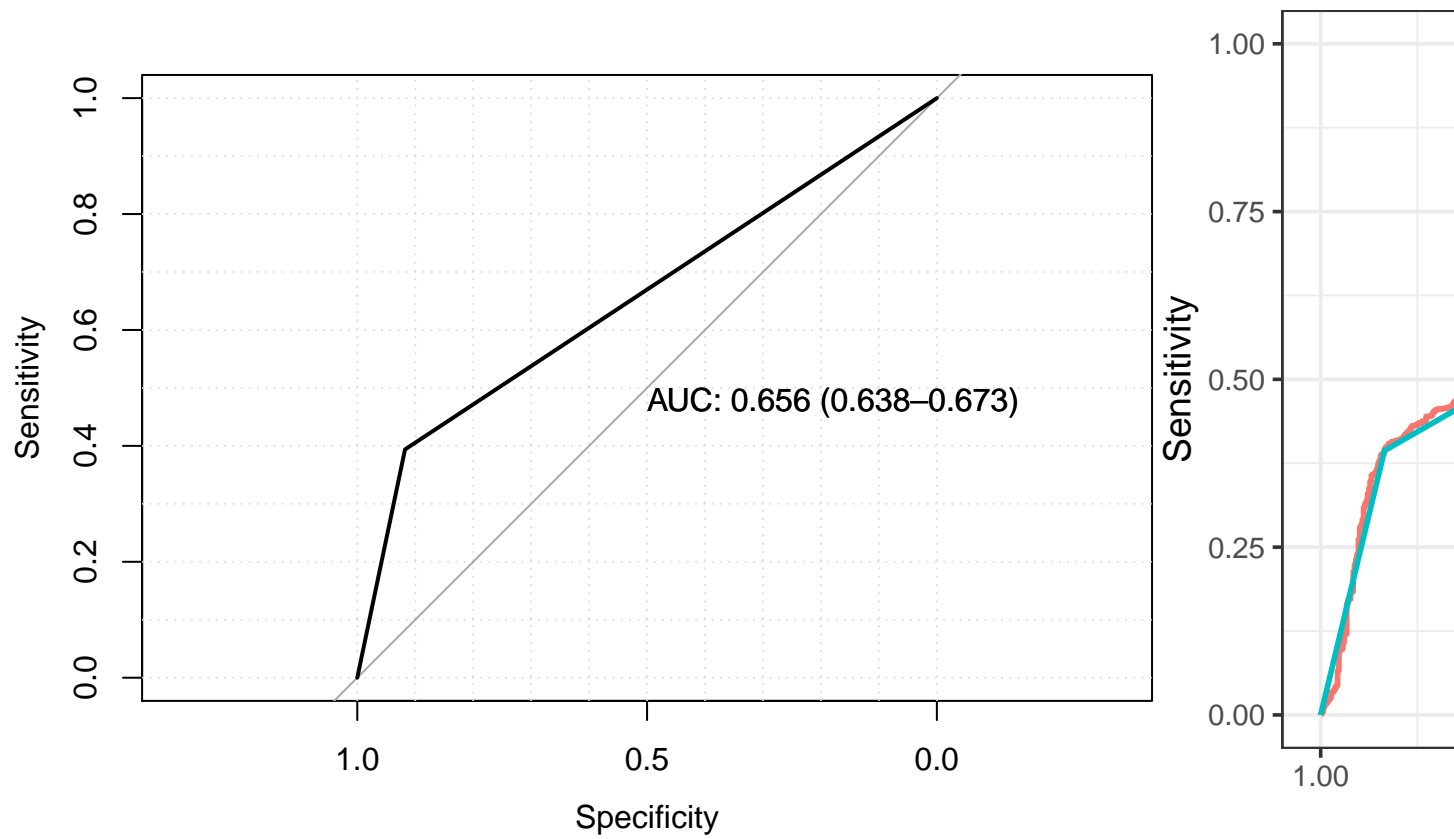

Two years - Smokers

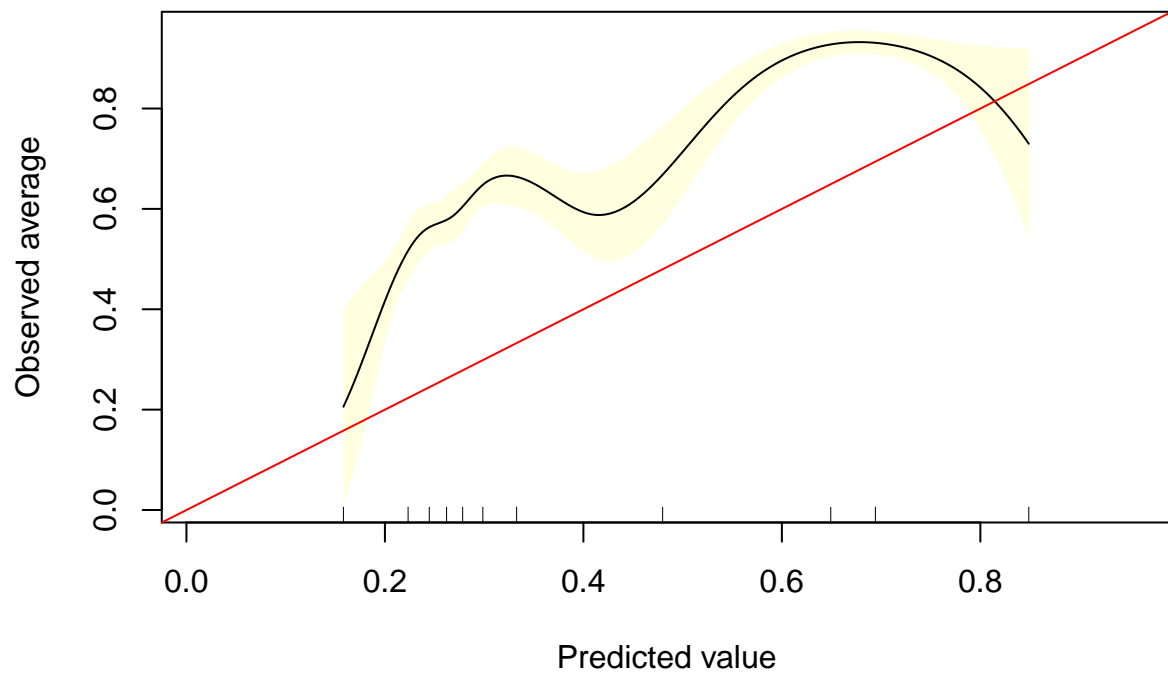

Setting levels: control = 0, case = 1

Setting direction: controls < cases

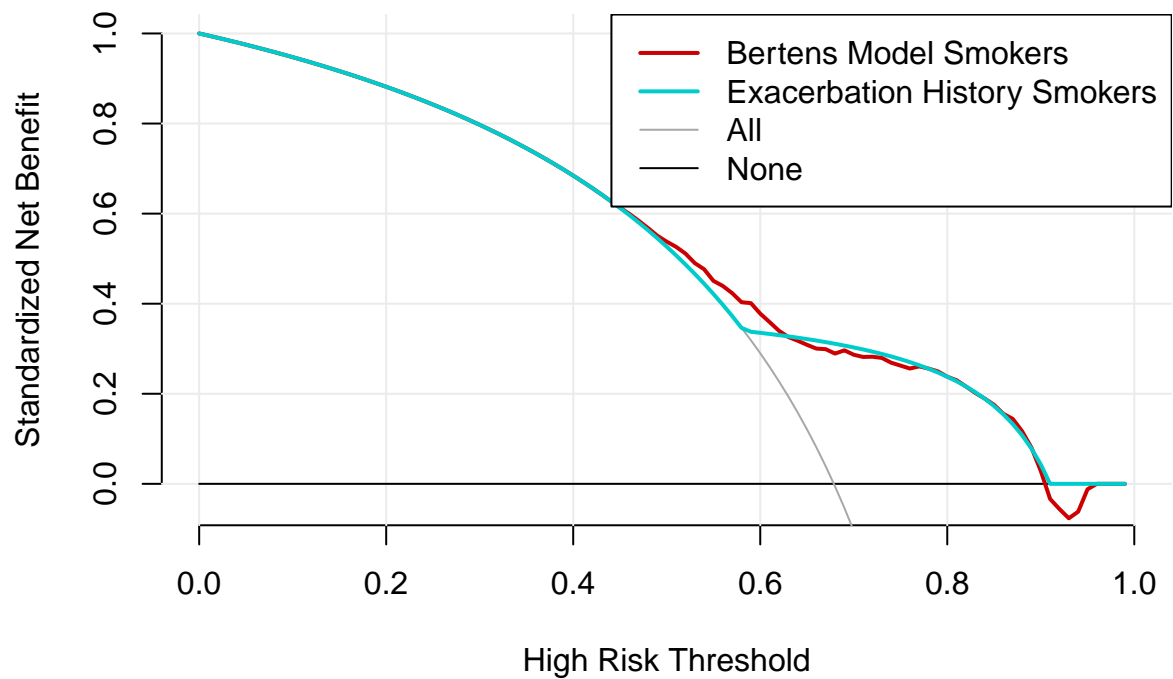

```
## Setting levels: control = 0, case = 1
## Setting direction: controls < cases
```

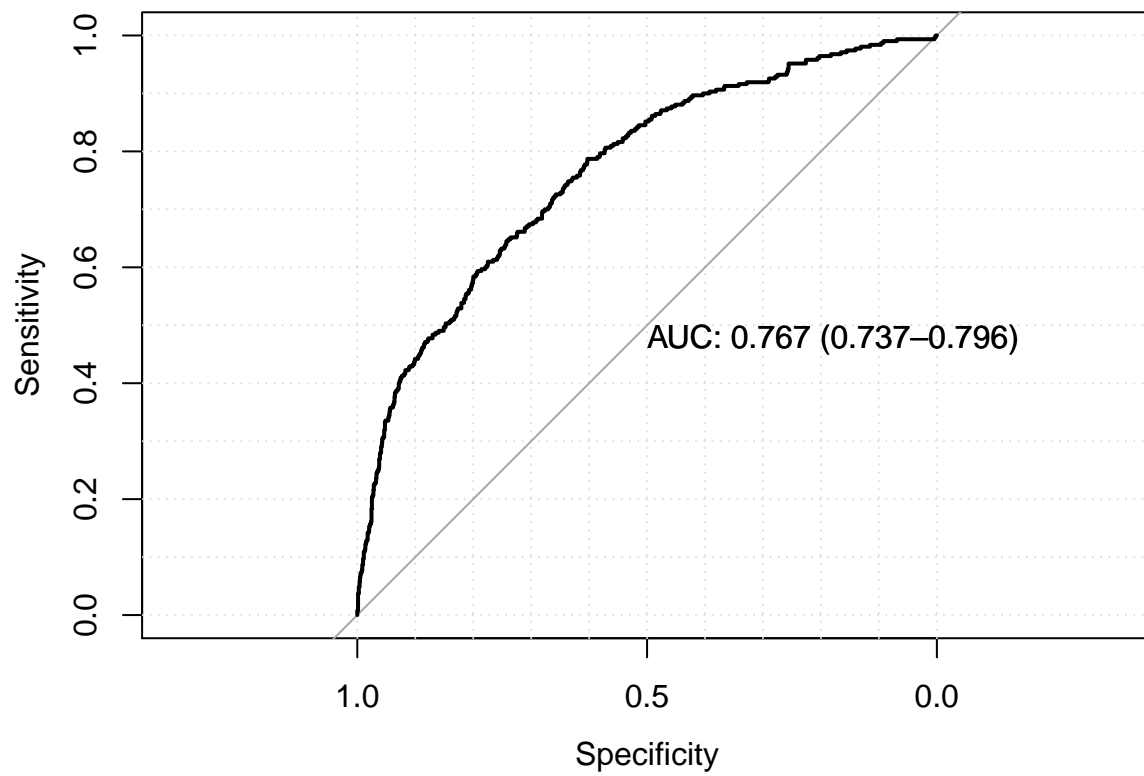

Note: When multiple decision curves are plotted, decision curves for 'All' are calculated using the p

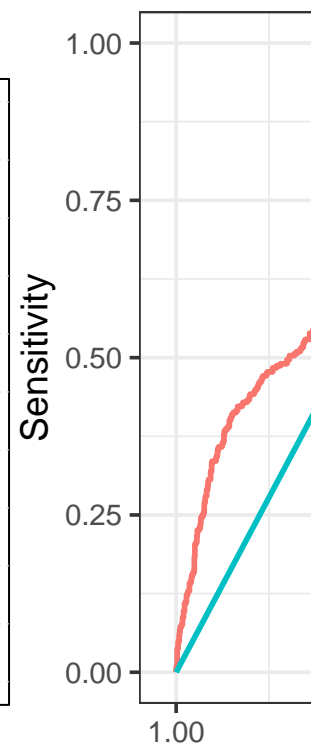

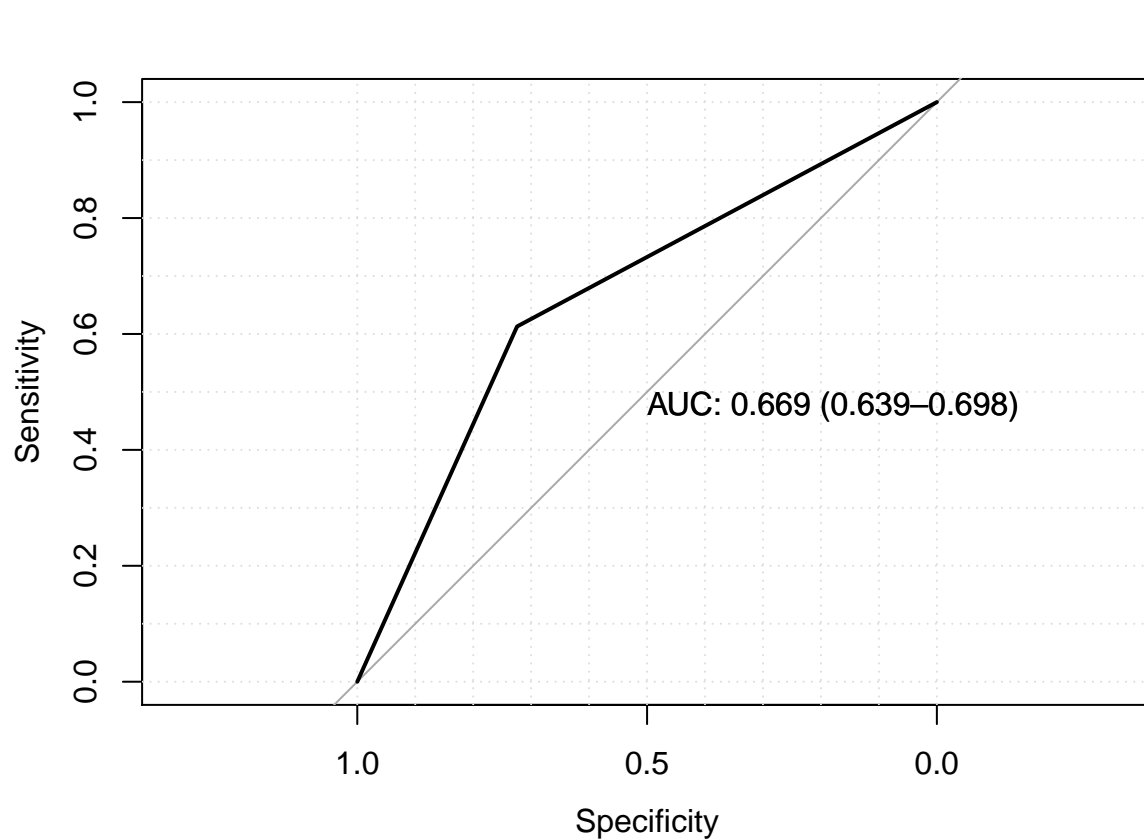

ACCEPT Severe

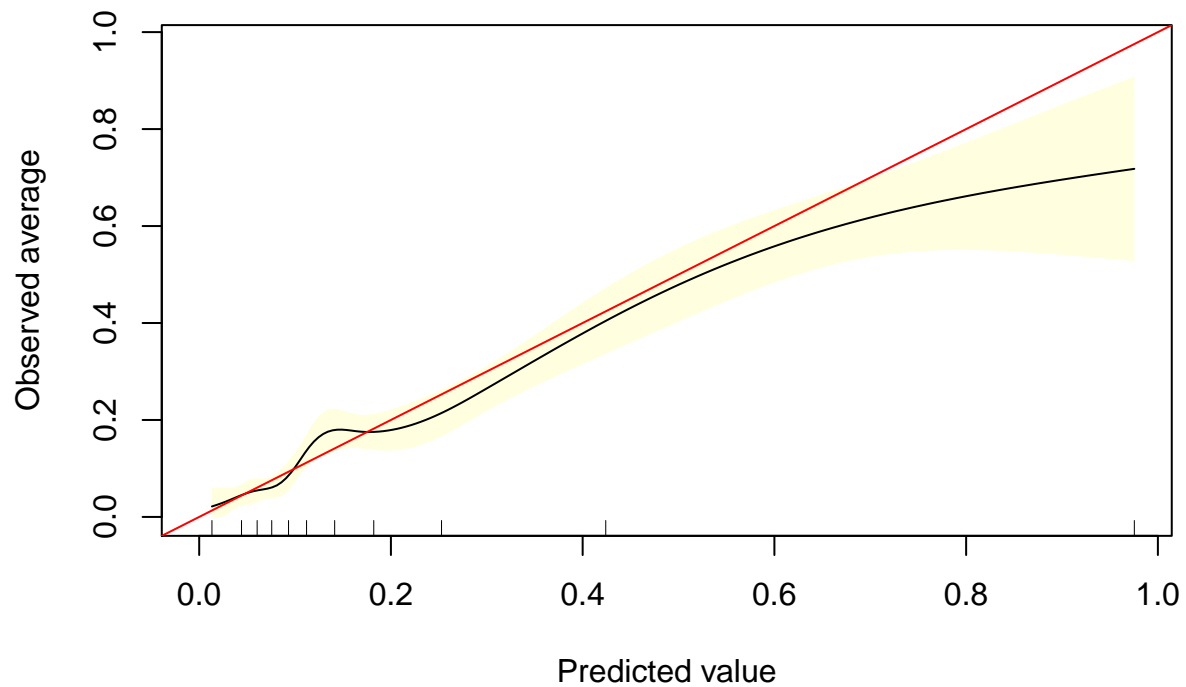

Setting levels: control = 0, case = 1

Setting direction: controls < cases

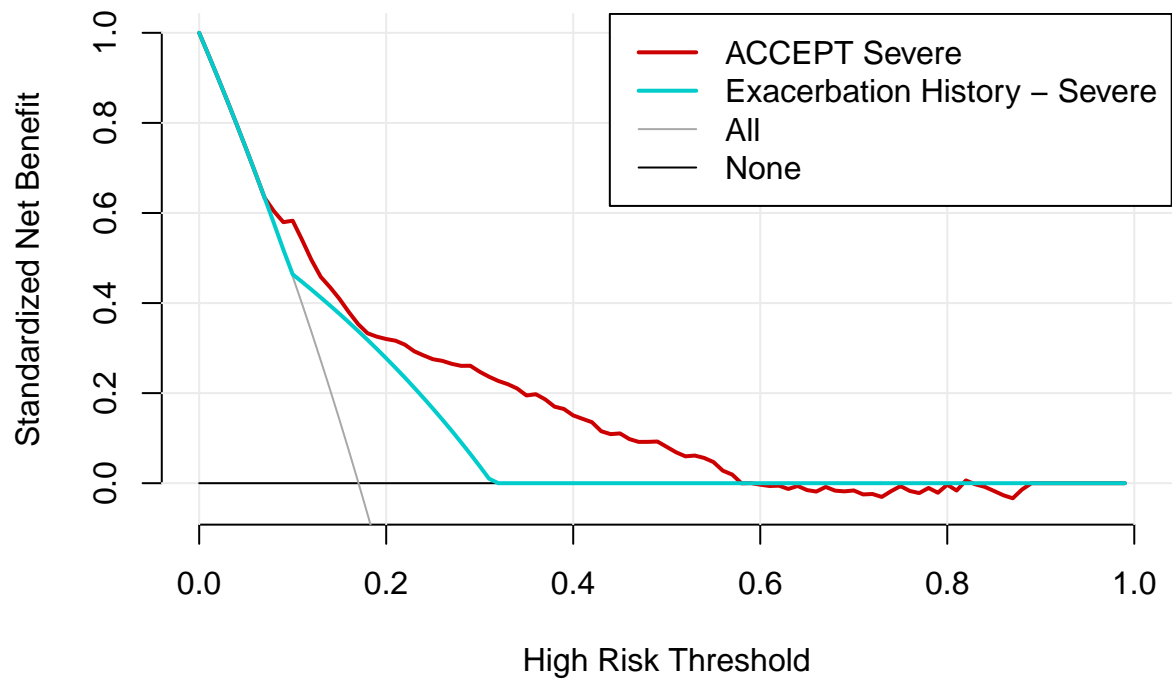

```
## Setting levels: control = 0, case = 1
## Setting direction: controls < cases
```

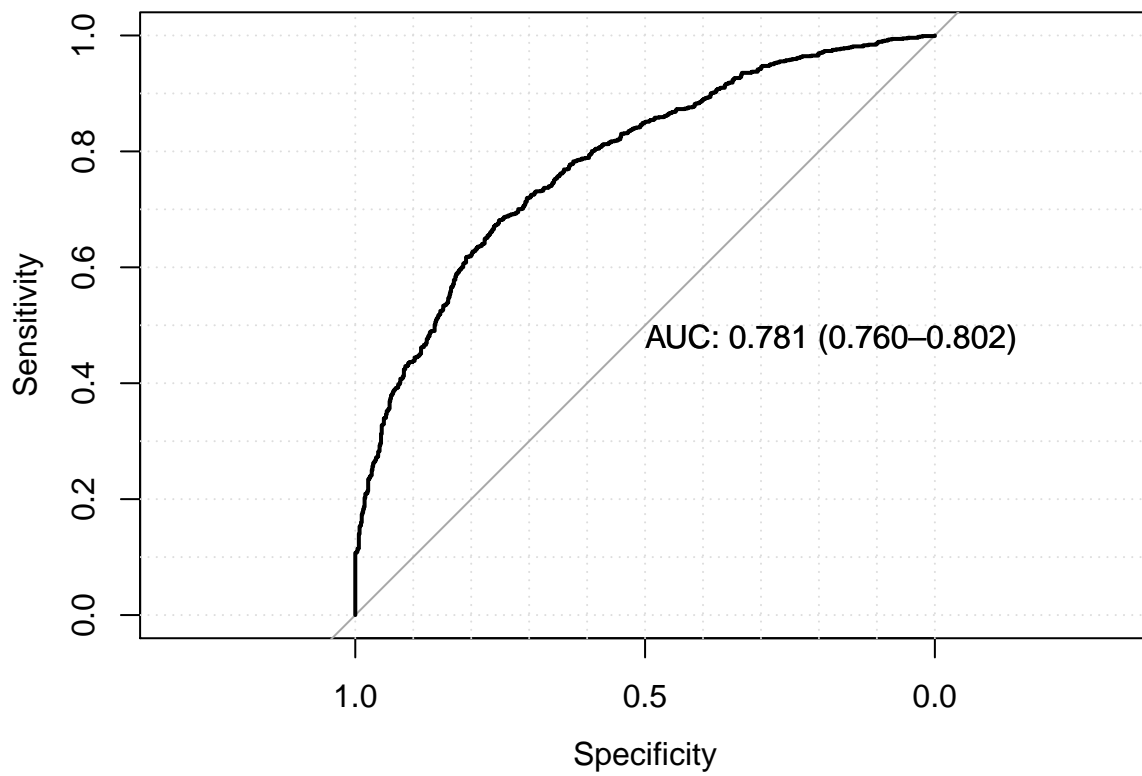

Note: When multiple decision curves are plotted, decision curves for 'All' are calculated using the p

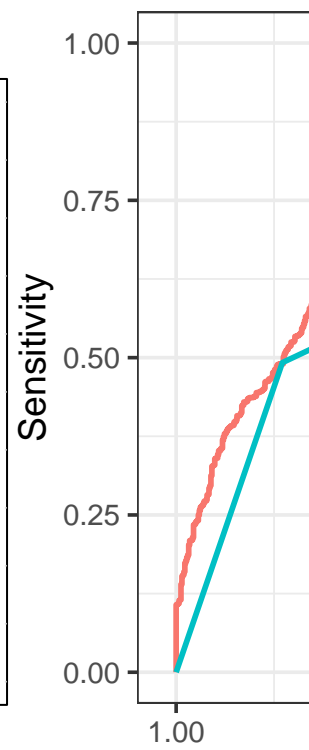

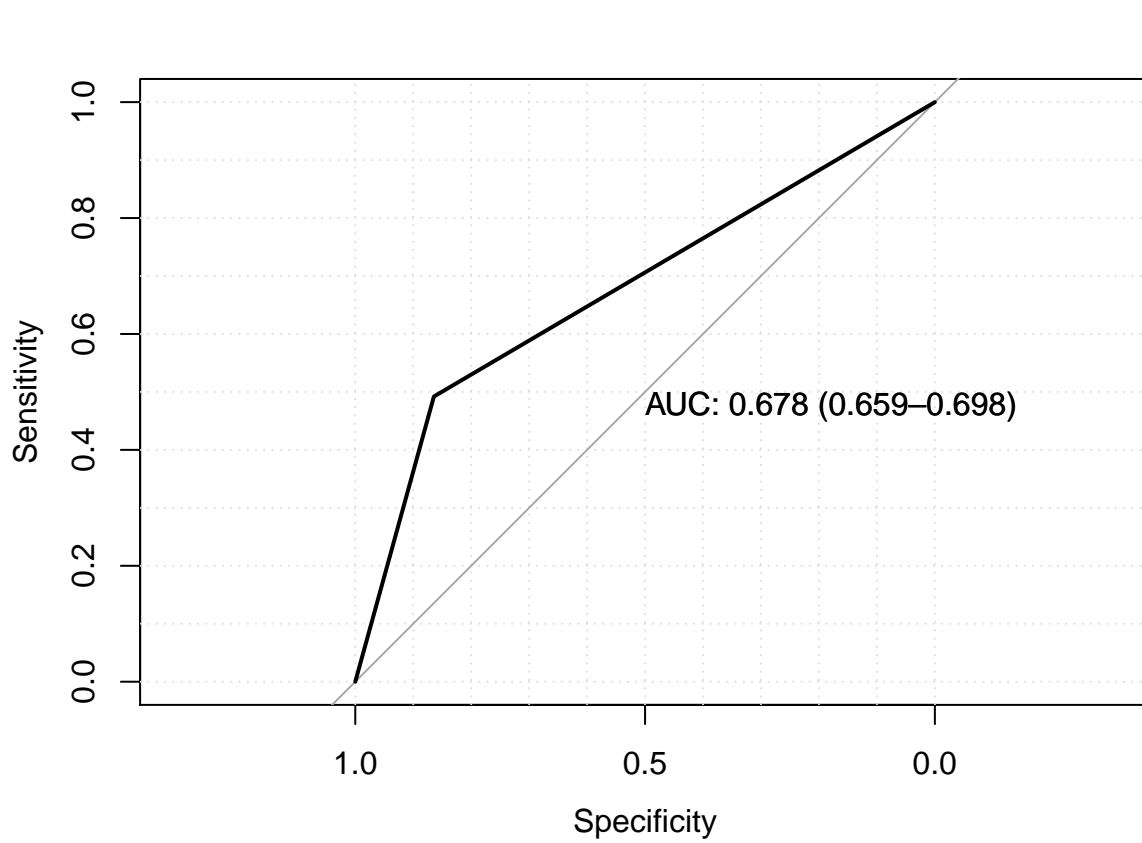

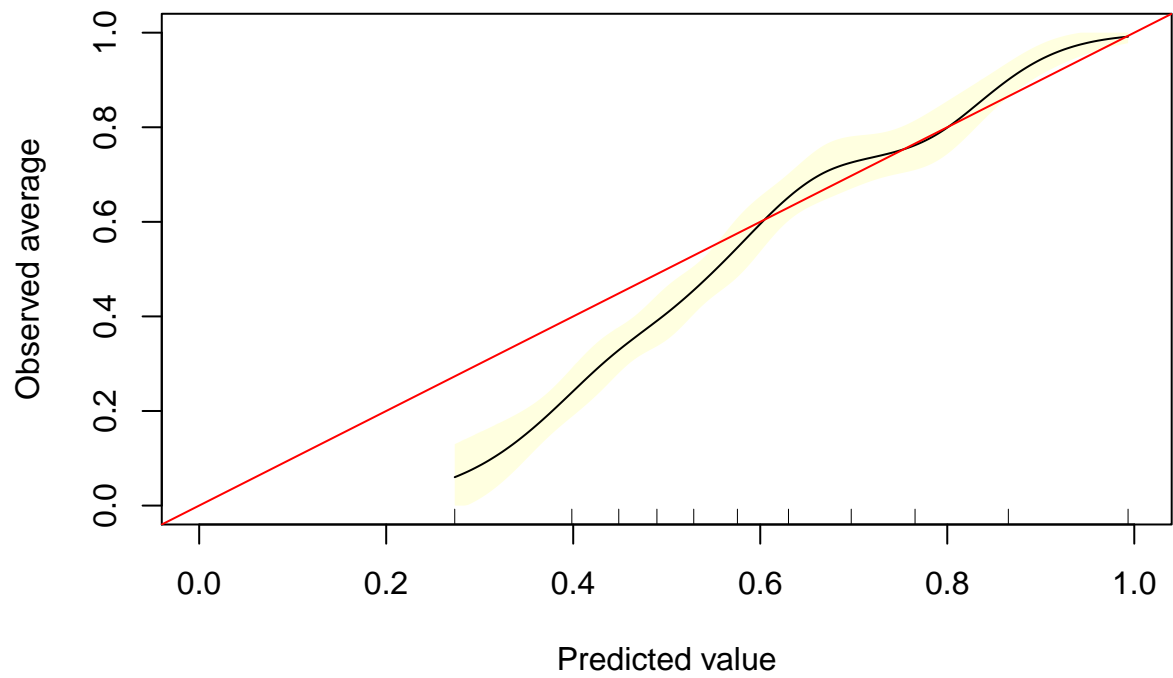

Setting levels: control = 0, case = 1

Setting direction: controls < cases

```
## Setting levels: control = 0, case = 1
## Setting direction: controls < cases
```

Note: When multiple decision curves are plotted, decision curves for 'All' are calculated using the p
